The geology was mapped in the field using U.S.G.S. 7.5-minute, 1:25,000-scale topographic maps. The 1:25,000-scale topographic maps were compiled by G.C. Moore for the 1936 edition of the State Geologic Map of Kansas. The geologic map is available for field use only. This map was produced by computer-aided cartography using the GIMAP (Geologic Interactive Management Map Analysis and Production) system developed at the Kansas Geological Survey.
